Illinois

♠ MANY WEEKS before the final deadline, the wheels started grinding out ideas for the 1955 Alpha Chi Rho Homecoming display. After much thought and careful deliberation, it was finally decided that Alpha Chi Rho would put on their own Block "I". The engineers got together to figure out how we could flip 1292 cards, and came up with the idea of having 34 rows fastened by dowel rods to a central crank assembly.

This system permitted each row to rotate, thus giving the effect of a block of students all flipping their cards together. The week before Homecoming all of the downstairs' furniture was moved into the card room and construction began.

Thursday before Homecoming rolled around, the construction was finished. All that needed to be done was fitting it all together. Several of the Brothers and Pledges decided to stay up all night and finish the job. Morning dawned and found
